

## IWOofurn ComBox

Communication fast, simple, secure and cost effective

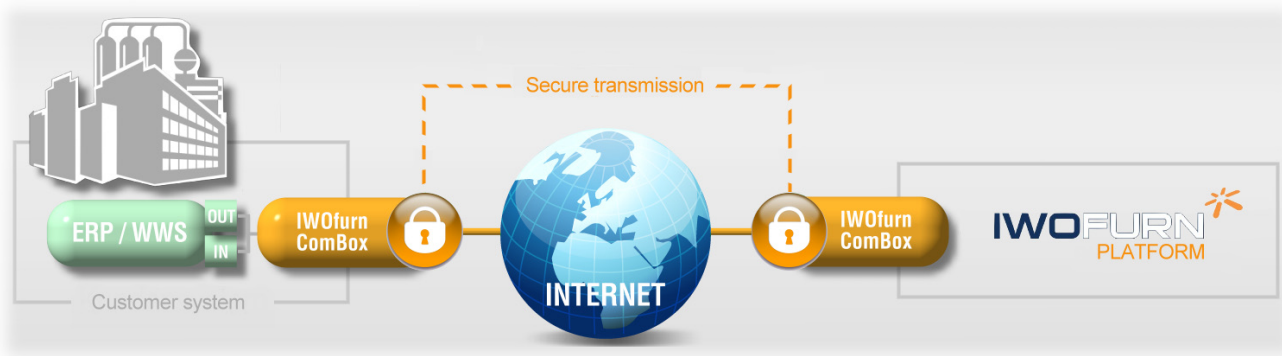

**IWO**FURN 

## IWOfurn ComBox

The configuration requirements for the electronic exchange of business documents are becoming increasingly complex. Aspects such as availability, security and clarity play an elementary role in the sending and receiving of messages because these messages usually have a real monetary value, are time-critical and transferred in large number by an automated process.

There are many communication solutions with their advantages and disadvantages. For example, the use of the telecom service Telebox (X.400), the most popular but as well a very expensive and intransparent communication procedure. Better: switch to a transmission procedure which does not cause any transmission costs, but take care, there are a few procedures here too which are to be classified as unsatisfactory in terms of handling and security.

The IWOfurn ComBox has been developed as software solution to cover the requirements of availability, security and clarity. The aim was to unite all the advantages of the existing communication solutions in one product. The IWOfurn ComBox can be easily integrated into the existing systems (ERP/MMS) via an API interface and is also easy to operate: switch on and get going!

### Why switch to the IWOfurn ComBox?

#### **No volume-dependent costs, i.e. full cost control!**

No costs arise for the sending and receiving of data via the IWOfurn ComBox – irrespective of the data volume.

#### **No troublesome need to find out the whereabouts of data, i.e. high transparency!**

Make sure your message tracking is transparent! You receive clear status information on the sending/receiving and the processing of data so that there is no need to worry about tracking data. The graphic interface of the ComBox permits a simple search for individual message packets. The storage and logging of the data flow is a further feature of the IWOfurn ComBox.

#### **No breaks during the transmission of large data volumes, i.e. greater stability!**

The foundation of reliable communication is a software which runs stable even whilst transmitting very large data volumes. The IWOfurn ComBox satisfies precisely this requirement.

#### **No chance for the man in the middle, i.e. greater security!**

Security and reliability are important aspects of data exchange via the internet. Our communication software is based on these points and guarantees the integrity of your data through a high performance encryption algorithm. Furthermore, only one outgoing port in the firewall needs to be activated. This means that the connection is set up by the sender. As soon as the connection is set up the sender can also receive data, i.e. your firewall is as safe as ever!

<b>Costs</b>					
No transaction fees	✓	✓	✗	✓	✓
No monthly fees	✓	✓	✗	✓	✓

## Upgrade possibility for the IWOfurn ComBox

### Splitter

During the electronic business data Exchange one file is usually transmitted which contains several vouchers. This may lead to problems during archiving because some archiving systems are only able to archive individual vouchers. Instead of time-consuming and costly adjustments to the archive system, you can use the splitting module for fast and inexpensive implementation.

### Doublet checker

Does this sound familiar to you? You Have an order, an invoice or similar twice or three times in your system (ERP/merchandise management) although this should not be so? This is probably due to inadequate checks in your system. The nuisance of searching could be a thing of the past by using the IWOfurn doublet check module.

### PDF generator

Can you or your accountant read and Understand EDIFACT, XML, ASCII etc.? It would be far simpler to have a readable PDF document generated from the data received to make your work and that of your accountant that much easier.
