

Services of the IWOfurn Networking Center

You wish to receive master data/electronic catalogues from your suppliers as quickly as possible and save your purchasing department the unnecessary work of manual master data entry in your merchandise management system, but do not have adequate staffing capacities to push ahead with this topic in your company.

The IWOfurn Networking Center offers you an on-site service to obtain a large number of electronic catalogues from your suppliers in a short space of time. The IWOfurn networker comes to your company and coordinates the necessary processes and the communication between your purchasing department and the suppliers.

- You request an employee from the IWOfurn Networking Center for an agreed period of time.
- Your purchasing department and the IWOfurn networker together define a list of suppliers from whom you wish to obtain electronic catalogues/master data.
- In a first step the IWOfurn networker gets in touch with the suppliers to request master data. He explains to the supplier how this topic can be implemented as quickly as possible with the assistance of IWOfurn and how he can satisfy his customers, and which advantages he as supplier has by providing the catalogues.
- If the supplier does not wish to supply or cannot supply master article data, then in a second step the IWOfurn networker discusses measures and the further procedure with the purchaser responsible for the respective supplier.
- In the third step purchaser and IWOfurn networker together get in touch with the supplier to notify him of the Further procedure.
- If it is not possible to provide the master data for technical reasons, a schedule is agreed with the supplier for the provision and compliance with this schedule is monitored by the networker beyond the scope of the on-site deployment.
- If required, the IWOfurn Networker offers the supplier support in catalogue provision on IWOfurn. He supports the supplier in the creation of the catalogue until the catalogue has the quality required by the purchaser.

The objective of the on-site service is to achieve a high degree of catalogue provision through short communication paths between the trade (purchasing), IWOfurn and industry. This is intended to noticeably relieve the work of the purchasing department whilst simultaneously increasing the EDI networking ratio and the order quality.

Costs of the “master data procurement” networking on-site service

We only charge the travel expenses and an expenses allowance for food and hotel of € 150.00 per day. You will not be charged for working hours.
