

Legally compliant and voucher-free invoice data exchange with electronic signature

Something which has long become standard practice with telecommunications providers and consumers is now available in B2B practice: completely electronic invoice data exchange – not only for PDF invoices but now at last also for automatically editable EDI messages. And all this without additional vouchers such as collective invoice lists.

Invoice exchange is now at last extensively automated in the B2B area too – to the benefit of recipients and senders of invoices alike. Using the services of the IWOfurn eBilling Center you can use the functions of “signing“, ”verifying“, “time stamping” and “encrypting” in combination or as individual processes.

Legally compliant invoice forwarding

Faster payment receipts with minimised costs: generate invoices digitally and send them signed.

Using IWOfurn Services, electronic invoices can be generated, converted, signed (also mass signings) and distributed.

The digital sending of invoices has important advantages: no more costs for postage, printing, paper or manual processing. The digital invoice is also with the recipient in a matter of seconds so that the time to payment receipts is shortened and cash flow improved.

Sending of signed bills with IWOfurn covers both formatted electronic sending (EDI, XML) and sending in pdf format.

IWOfurn assumes the conversion, signing, archiving and electronic transport of the invoices to the respective recipient in the scale required.

The services can be integrated into any application scenarios and work flows.

Legally compliant invoice receipt

Cost-optimised receipt processing: receive invoices digitally and securely, check and process them automatically.

IWOfurn Services offer you all the components necessary for correct processing of incoming electronic bills.

Service components include conversion, verification of signatures, archiving and forwarding of data to connected applications all of which can be scaled and may be used independently of each other.

There is then no need to process the collective bill list which usually accompanies the EDI invoice data exchange.

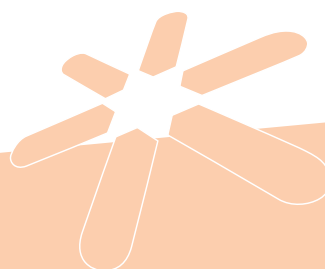

Archiving of electronic invoices

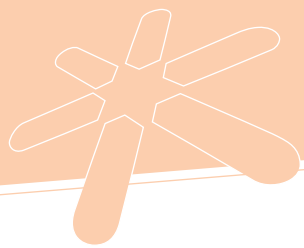

Archiving of master data and transaction data as well as other information from the IWOfurn eBilling Center. The use of the IWOfurn archiving service is not absolutely necessary in interaction with other IWOfurn services. Rather, the integration into your existing archive solution or alternatively the use of the IWOfurn archiving service is offered.

The IWOfurn archiving services are, however, a good supplement if the IWOfurn eBilling Center is used

Statutory provisions for digital invoice exchange

Since 1 January 2002 the Turnover Tax Act has stipulated that the recipient of digital bills is only entitled to deduct prior tax if the digital invoice either has a qualified digital signature or if the processes are secured via a bilateral EDI agreement which guarantee and prove the unaltered status of the content and the identity of the undersigned.

Legally compliant invoice exchange – the result:

- Direct costs (e.g. postage, printing, paper) and indirect costs (e.g. personnel costs) for the creation and processing of paper invoices are eliminated
- Faster payment receipts
- Cash flow optimisation
- Legally certain processing
- Leaner processes
- Enhancement of your existing IT investments
- Fast return on investment

IWOfurn eBilling: the advantages at a glance

- Electronic exchange of bill data in accordance with the requirements of the current Turnover Tax Act
- Time and cost savings resulting from the reduction in material, generation, sending and archiving costs
- 100% compatibility due to the supplementary character of the individual solution forms
- Forwarding in high volume range including mass signature possible
- Fast return on investment (ROI)
- Protection of existing investments by integration in existing process and organisational structures
- Broad and combinable range of solutions for different users, formats and transmission types

Functionalities

- Legally compliant processing.
- Signature service (IWOfurn signs invoices in a qualified manner with authorisation).
- Verification service (IWOfurn checks the validity of certificates and the completeness of the invoices).
- Integration in system landscapes.
- Interface to archiving (provision of all requisite documents):
 - EDI message
 - Signed EDI message
 - In-house file
 - Verification protocol
 - Readable files with contents of the electronic bill
 - An indication file for the archive system (optional)

IWOfurn - Integrated World of Furniture

IWOfurn efficiently and flexibly combines companies, information and processes. IWOfurn offers electronic communication for all cross-company processes from the initiating of business, through provision of product information to Order2Pay business transactions.
